## Introduction –

The story and ideas expressed here have, with one exception, been taken from other authors in their directly revealed automatic writing or from those believed to be realized masters. To my chagrin, I have lost the references for the source material as I read much of it many years ago. This picture I present makes logical sense to me, and I hope it does to the readers, as it answers many questions; and no, the answer is not “42” (Check Douglas Adams if the reference is obscure). All of the references to scientific principles are readily available on the internet, actually, as is most of this material.

Dave Allen describes it to near perfection on YouTube – at this link -

<https://www.youtube.com/watch?v=BGASvVqzOa0>

- heartening stuff.

## How it all started -

Once upon a No-Time and No-Place there was a giant No-Limits Thingy (NLT). Now read this next bit slowly, please, because we are in a “place” that has no Time; no “space” and therefore no “direction”. So nothing happens because nothing **can** happen – “happening” always means individual items moving from one place to another, along with some time scale – the winning lottery ticket must be redeemed, the drink that slides across the bar to your hand – But now (!) we have no space and no individual items and no time. You cannot **do** anything. Nothing can happen. So let that sink in for a while before we move on.

Naturally, boredom sets in sooner (ahem) or later (ahem), as the NLT could/can do nothing - go nowhere, see nothing, never check the e-mail, no doomscrolling, never dress up and swagger downtown to see (gulp) Celine Dion in Las Vegas or take a nature

walk and a dump in the woods or watch decent movies or have “civil” wars. All such activities need space, time and separation into separate things and beings – thee and me. At the instant of this aggravating realization of boredom, the NLT did the one thing possible for it to do – in fact the only thing this No-Limits-Thingy **could** do – which is what, exactly?

Here we need pause for rational thinking, which humans are allowed to do – What can a giant No-Limits Thingy actually do? And what would be the motivation? It seems a little trite to say that *boredom* is the reason for it all. Yes, you are welcome to provide a more lucid suggestion, but I bet you cannot. After considerable thought, the early great eastern masters realized there was **only one thing** this giant tiny massless NLT could do, and it was this – the NLT could/can separate bits of itself by surrounding each with clouds and layers of forgetfulness, which prevents the bits from seeing the whole of the NLT and the other bits. You may have trouble thinking that this is the only thing the NLT can do – but with no time and no space, just consider this carefully and you’ll see it’s true. Take your time, as we now have plenty of it. And that’s why **everything** is part of the NLT.

When a (the?) No-Limits Thingy does that, there's an almighty blast of creation of matter and space we call the Big Bang, which was the Great Creation. We (scientists, not me!) can back-track this event to about the first billionth of a second after the actual moment, when all matter in the universe was contained in an impossibly tiny space, which suddenly expanded as the Big Bang, and all else follows from this up to the present, and also a reasonable estimate for the future. Now, some readers might take exception at this point, thinking this is just some crazy drug-addled stuff, here. Which probably means they have not read about the Big Bang and/or quantum physics in the last few decades. Perhaps we might pause here while they catch up. And, just in case you are getting carried away about how smart we all are, there’s this - roughly 68% of the

universe is dark energy, while dark matter makes up about 27%. The rest - everything on Earth, everything ever observed with all of our instruments, all normal matter - **adds up to less than 5%** of the universe. Actually, about the same amount of viruses so far observed and named against the total of (perhaps) three million varieties.

Pretty astonishing stuff, eh? Well, now we can get to the good bits – especially about the bits of the NLT, the forgetful droplets - the whole point of the exercise. Because the droplets struggle about, knowing something's missing, go bumping into one another, thereby scraping away at their shells of forgetfulness – experience, it's called. Also, this is the reason that **everything is made of consciousness**, everything is “God”; there is nothing outside of the NLT. So Matter was created and is maintained by Spirit – not the other way around!

### **The Reason For It All -**

For each very tiny droplet, a little scraping (“experience”) results in seeing a bit farther, and soon further development means a grouping or coalescing of droplets can happen, in fits and starts, each time resulting in more perception and a change in outlook; and thereby a larger chunk of Spirit forming that “individual”. Each droplet at first simply accepting its individuality and bit by bit seeing it is not alone – there are other individuals around. When this grouping of droplets happens, at first the simple atomic elements appear, group and form gases which ultimately form stars; which form heavy elements and compounds, and at last planets which have minerals and permit plants and fungi, all having experiences. Further grouping becomes animals, which can become more “advanced” beings, as we humans like to call ourselves – enough to have at least some conscience on how badly we treat animals. These divisions between group-types are not entirely arbitrary, as the grouping of spirit droplets makes for considerable advances in abilities and responsibilities in these emerging entities.

There is one clear overriding aim in all this apparent material chaos, which is ultimate return to the great *now-very-much-something* Great Spirit, the NLT.

And so **The Reason For It All** is quite simply Entertainment. Life with Hollywood vs life in a French dungeon. Not much of a choice, really, but they all happen to all of us.. The *boredom* choice here actually is not a real choice, since it means an absolute absence of any activity and, no, you cannot die and start again – very different from a French dungeon. But now we have our dividing lines, our divisions, thanks to our Clouds-Of-Forgetfulness, the game is on Big Time – Us vs Them, the Game of Eons, the Game of Thrones (which I refuse to watch), until total merging into the Oneness at last.

### **Development -**

It's worth describing development and its purpose at this point. Once the NLT droplets reach a cooler point after the Big Bang, and have coalesced (grouped) into gases, the formation of suns happens. Suns have a distinct lifetime and periods of development. All heavy elements are created by suns ending their lives. Those materials go towards the formation of new suns, like ours, whose planets can then have these heavy elements in their makeup, like Earth, with its molten iron core, and six percent of its surface also being iron, and plentiful carbon and oxygen. Yes, we are made of stardust, to get fancy, from at least a second generation sun.

We may therefore see that early development of the droplets of NLT is necessarily “simple” – at first formation of quantum bits, which group to make atomic particles, then elements, which then further group to make compounds. A second generation of suns live out their lives, then perhaps a third generation comes around, and at last these compounds can start getting clever in their corresponding planets, like our own sun. We

have plenty of matter to be going on with, having millions upon billions of suns and planets to play with. Now we come to the seven levels as mentioned by the greatest realized teachers.

### **The Level of Mineral & Gas -**

Incarnated Period for Completion – (my guess) 10,000,000,000 years. This comprises the quantum particles, elements and compounds, crystals, glaciers and mountains, that do not fit our description of “Life”, as Miriam-Webster says, “an organismic state characterized by capacity for metabolism, growth, reaction to stimuli, and reproduction”, much sexier than minerals and gases. Here it is nonsense to ascribe emotional events, with the possible exception of boredom, as sitting around with nothing much going on for eons is what mostly happens. To move to the next level, the grouping of spirit droplet, now gases and minerals, arrives ready for a new being that becomes a plant, or enters the level of plants. (Yes, microbes and fungi are in here too, of course – but what do I know?)

### **The Level of Plants -**

Incarnated Period for Completion – (my guess) 1,000,000,000 years. When do growing crystals start being called plants? I make no claims, as each “level” described here is just words. When we are stung by a nettle, or fall out of a tree, we are doubtless interacting with the plant world. So, yes, we know what they are. Generally, we can refer to these “states of being” without doubt, when we are “in the middle” of a certain level. I mean, rocks inside a mountain are minerals in the middle of their stage. Nettles that sting us and trees we fall out of are also in the middle of their developmental stage as plants. But as plants, new things are appearing, which when in humans, are called emotions or desires. Actually, plants can be shifty and opportunistic; including deception, fraud,

misinformation and manipulation aimed at improving their situation, as well as drugging insects with caffeine, nicotine and of course sugar and thereby effectively enslaving them (check acacia and ants). So lets not pretend that plants are dumb beings. Plants also use animals to disperse their seeds, and that nettle sting to warn us animals not to go near them again.. There is also the real possibility that plants fool humans into spreading them around, such as spicy peppers. And toxoplasmosis gondii is a whole other ball game, just craziness!

I cannot believe this behavior attracts ***Karma*** as yet, as it is hard to believe a plant has free will, and could therefore behave against its own principles; this we leave to the higher animals and humans. But there's no doubt that sex and self-survival figure clearly in plants' scope of life, growing more important as development within that level continues. In here somewhere comes the starting development of sprites, those entities largely ignored by humans, which are brownies, faeries, and fairies; most likely far more widespread than we know. Your guess is as good as mine about the "grouping" that lot takes place to emerge on the next level.

### **The Animal Level -**

Incarnated Period for Completion – (my guess) 100,000,000 years. Again, we can confuse ourselves with words. Oyster larvae swim freely in water for two weeks until rooting onto a hard surface – plant or animal? Microbes? Fungi? Semantics, I say. When we experience the middle of the animal kingdom, such as when a bull chases you across a pasture – this is not a time for word definition but hoping the nearby tree will support our terrified scramble up, up and into safety. During the animal period those other elemental beings like dwarfs, elves, gnomes, goblins, gremlins, hobgoblins, leprechauns, pixies, fairies and trolls continue their development; which your guess is as good as mine which one belongs where. During this period, both sex and individual survival become stronger elements than before. Here the emotions of pride, wrath, envy and sloth bloom,

while lust and vanity loom large. So Karma with a capital “K” certainly starts making an appearance; while we cannot assign negative karma to a snake, a tiger or a wolf bringing down its prey; yet we have no trouble distinguishing “bad” or “good” behavior to our pet Alsatian that we left in the house that day; as we all ascribe knowledge of good and bad to higher level animals, who most certainly have a generous measure of free will, which includes courage, empathy and self-sacrifice. Once again, your guess is as good as mine about the grouping among animal individuals that takes place to emerge as a single being on the next level – how many and what types coalesce to make a greater spirit being – Humans!.

### **The Human Level -**

Incarnated Period for Completion – (Eastern master statement) 1,000,000 years incarnated as human, or about 50,000 lifetimes. Now we have no excuses for Karma in action – selfish and unselfish behavior bring their own results in equal measure. We are assailed with every temptation we can think of. During our 50,000 incarnations we all get the message at some point that selfish = “bad”; unselfish = “good”. The first few thousand times around we are focused on basic survival, being food, sex and defense. *Do not waste your time trying to talk of the wider understanding with these persons, they just are not ready* (No, I will not mention trump supporters). And let us not consider some humans that we believe to be lower in all aspects than some animals; they just have not realized that selfishness is not right.

I like to think the serious turn-over point is after half our lifetimes. Sometimes I think there is only one real difference between the higher animals and humans, and that is the ability to train oneself, self-discipline; if we can get off our lazy asses and do it. But as usual, “one size does not fit all”, despite adverts to the contrary. Each human spirit is free to incarnate on planet(s) other than this Earth, which changes their needs when and if they return here for more ~~punishment~~ lessons. Perhaps animals we see on Earth can

also do so. Then there's **Home**, or the Afterlife, as we mistakenly call it, as it is of course also our "Beforelife", where the living is easy, and without challenges; which means in turn that possibilities for spiritual growth are limited; hence the need for reincarnation to speed things along, and to overcome the boredom felt when there are no challenges.

Incarnation is so effective because of the two most stunning and wonderful miracles with which we are blessed honored, which are: first, how our spirit stays attached to our body and second, how the complete memory wipe works at our birth, each time. Without this wonderful memory wipe, who could face their current incarnation to completion, as the knowledge of our previous selfish behavior and death(s) would be far too much to bear. So we can start fresh. But, as usual, one size does not fit all, and some incarnations are left with stronger or weaker memories of previous ones. Thankfully, a great minority! Grouping of individual human spirits leads to a being with stunning capabilities, about which we can only speculate – which I do, after the next item.

### **Why Reincarnate? -**

So here we are in the Beforelife. In our first rounds of incarnation as humans, I believe we spend very little time in the Afterlife, as we absolutely desire above everything to have another human incarnation as soon as possible. No matter if it is the middle of an Ethiopian famine and "civil" war. We just will take anything. Again, let us not mention trump fans.

Later, after many incarnations, we begin to reflect. We know what our last incarnation was like, starting with painful birth and ending in (possibly) painful death. Perhaps we have found out about incarnations before that, also full of painful events. But, Hurray!, here we are in Summerland, free to stay as long as we like and do (almost) anything. So we do lots and lots of things, and at last get on with what we should have been doing all along – social work, helping those in need. The newly arrived always need gentle instruction and guidance – *You're dead now, and this is Summerland, where you*

*can relax as long as you like.* Huge sighs of relief as each realizes that now, there are no challenges.

So, we hike about exploring for years; then we hike the other way, exploring for more years; then we visit alien planets, and get uncomfortable. All along we attend the best in local entertainment, wonderful and uplifting plays and movies, reading wonderful books; and watch and read them all again and again.

So what happens? Surprise! We get bored (this is where we came in, I think). And say to our friends – *You know, I think it's time I reincarnated again!* - To which the response is – *Arrggh! No!*, while some make the sign of the cross with their fingers to ward off the awful thought. So, you drop the idea; but one century later, lo and behold, you've really had enough, and chose once again, to reincarnate, knowing that your development is just not getting anywhere without the serious and tough challenges of a reincarnation. Then you find that there's a queue for planet Earth because it is a popular place and you can really advance your spirit there. So you have wait for the right time and parents. Which you do. Or you can chose an easier civilization on other planets. So you discuss possibilities that will suit your spirit's needs with those that know these things - *And off we go again.*

### **The Super-Human Level -**

We can use the term Superhuman, as we will each have lived about fifty thousand human lifetimes over one million years incarnated before filling the human experience. And whatever alien experience aliens have on their billions of planets. Moving to the next level, **Superhuman**, means spiritual bonding, or grouping with about 42 other humans who are also ready to move on – now we are seriously soul-mates!. Yes, there's that wonderful number 42 once more. *This means that about two million one hundred thousand human lifetimes are fully known, understood, and accepted into this new being, this Superhuman.* Even if you like lower numbers than the foregoing, the total incarnation count is enormous. Try and wrap your mind around that experience! The TV show

“Sense8” touches on this, where eight (only 8!) single incarnations use all their abilities at once; fascinating. Among other things, it means the individual lifetimes lose all importance, yet are still available for review, along with all the knowledge gained. At this point, Who cares?

I believe that angels are a superior level of human, probably ready to “group” and move level, and not a separate class of beings. Why? Because I find it unreasonable to believe that the huge, unimaginably powerful entities of Superhumans can stoop to fiddle with an individual human incarnation at one or another point. It makes no sense, as these mighty beings know beyond all doubt that everything turns out alright, no matter how dire it may look to the individual at that moment in its incarnation.

One automatic psychic writer describes certain physical incarnations and reincarnations as happening within suns, perhaps at the level (vibrational rate) of Superhuman. This beggars the imagination – first by trying to imagine the enormous stunning real estate within a sun, and then as how can such incarnations (bodies) cohere in the explosion of gases within? But why not? Our own spirits stay attached to our own physical bodies somehow. What possible motivations could they have for actions? What, where, how & why – all way beyond human ken. Might as well use a Power-Point presentation to explain to an ant heap why we drive to work. But, no doubt, they too will have tens of thousands of incarnations as Superhumans, with plenty of time to work things out. I wonder what they have in the form of entertainment.

### **The Divine and Absolute Levels -**

Attempting to describe this or the next level would be pointless speculation. The time scale I have given to the first three levels is based on an Eastern master saying humans needed one million years incarnated to fill the human experience.

I think the same Eastern master(s) agree that once the period of development as individual beings is concluded at the end of the Absolute stage, the spirit, all spirits, return to oneness with the NLT. With stories to tell – and what stories!

### **Soul Mates -**

The term “soul-mate” is bandied about, implying spirits whose friendship may span many lifetimes. But just consider the reasonable possibility that you make one really good new friend every two lifetimes; this would mean perhaps 25,000 such. One every ten lifetimes would mean 5,000 exceptional friends, which is still way over the top. I really think this term actually applies to souls who are nearing their term as humans, and are getting together for the next stage.

### **Matter and Spirit -**

Consider the first law of thermodynamics, which observes that energy cannot be created or destroyed. Just like Spirit - which it most certainly is (whatever *that* is – scientists as yet have not even formulated a theory, *any theory*, as to the nature of consciousness – but they have learned just lately (1999) to call it *The Hard Problem!*). But energy can be converted from one form to another; and there are myriad conversions in both directions (matter to heat & vice-versa) happening at all times across our material universe, of which we so far can see only 5%.

### **Entropy and Chaos -**

Now let's go to the second law of thermodynamics, the law of entropy, which states that in any isolated system, the degree of disorder (chaos) can only increase. If we

imagine our whole universe to be an isolated system, we see the degree of disorder is always increasing - or otherwise put, material order always degenerates. This could get to be a pessimistic outlook – if we see only this dimension. No, and negentropy only covers the improved, or ordered part of the actions – i.e. an automobile is the final result, the ordered part of the activity leading to an automobile – while the whole picture shows smelting factories, mines, plastics and resulting waste, sometimes toxic – required to produce the automobile. The whole picture, depressing as it is, always means entropy (disorder), chaos increases.

Everything uses energy to form and sustain itself, be it mineral, plant, animal and ourselves. Each energetic transformation is less than perfectly efficient, so energy is wasted (not destroyed) each time. So while we are apparently increasing the level of order directly around us with highways, bridges, prisons(!), vehicles and shopping malls, the whole is inevitably decreasing. In forming everything that is ourselves and our civilization we are actually only increasing chaos. Like I said, this can get depressing.

Even if we could collect a whole sun from another nearby star system and use up its entire mass of energy cleaning up our system with food, palaces, aqueducts, schooling and finally decent medical care and a basic income for everyone, weekend trips to Mars, flying cars for the masses - no matter what the scale of the fancy engineering, the inescapable reality is there - we would have once again increased the overall level of chaos.

Descent to disorder can only be delayed, never prevented. Like rainwater from a mountaintop to the sea (forget evaporation), it always descends, can only be delayed, never goes uphill and always reaches the great ocean at last, reuniting with the Great Spirit, the NLT.

While it's acceptable for rainwater to do that - we have a lot of fun with it while it does so - the fact that *energetic order always tends to matter to chaos* is an ultimately depressing truth, as the material universe will end in freezing darkness.

### **The End of the Material Universe -**

Pretty depressing, really, when it comes to the inescapable realization that the universe is in process of expanding to a cold dark emptiness with sparse atoms doing nothing much but unravel (The Big Freeze), or a total final breakdown (The Big Rip), as the Big Crunch is looking most unlikely, as we have dark matter and dark energy comprising 95% (!! ) of matter in the universe, neither of which has been seen, only inferred. How little we know!

Like any sane person, after taking interesting drugs and contemplating suicide, I blotted all this knowledge out of my mind for many years, until I realized how the universe as a whole must balance itself (see ***Below Balance***).

### **Flatulent Mythical Nonsense & Stunning Constants -**

Religion and religionists were all very well in the human days before theatre, providing pricey entertainment where there was none. Their leaders continue to trumpet the same flatulent mythical nonsense as they did then, with almost always greed, money and power as their motives. This may sound cynical, but the rational among us see it to be so in the finances of any megachurch (I mean, private jet airplanes? Really.).

We also see another striking reality, that of the *Fundamental Physical Constants*, of which there are at least 40, or even 200 depending how you count them. If any one of these varied by as little as one percent, the whole game would not work; that is, the universe could not have formed in this nearly stable state. Now, how's that for imaginative foresight by the Great Thingy, the NLT? We call the resulting mental shambles in humans *cognitive dissonance*, and hope that we can hold these two conflicting ideas steady, that of purposeful design and accident. Accident really is not looking good when we crunch the numbers – seriously now, what are the chances of the values of the constants being just so?

Much as we fail to accept the Eye-In-The-Sky theories (Religions are, um, Constantly with us), it is my understanding that the major religions might actually agree on one thing, while perhaps presenting it in different ways. This is that *Spirit creates, forms, maintains and uses Matter for its own purposes* - the grand illusion. We might even also agree that the Great Spirit's purpose in the universe is actually entertainment - by seeking the light, by increasing **perception, understanding and love** in all its forms. Fundamentalists will not like this, of course, because how can you browbeat your huddled masses with eternal damnation unless you make them believe it's real?

### Joyful Reunion -

The inevitable end to all this is **reunion of all portions** of the Great Spirit, the Atma, the No-Limits Thingy, call it what you will. Now *there's a home-coming party*, when the last chunk of spirit reunites. **There must be no interference** from the great NLT, as this begs the question, which is to let each droplet get back home, finally cleared of its fog, and tell its own story - "For a while there I thought I was queen of Sheba" etc. amid gales of laughter and tears of joy. The great Thingy is no longer bored to impossible tears and is now watching sunsets, hearing the Mormon tabernacle choir and sending money to

televangelists - because we are it, every little bit of it. Total and complete enlightenment, with lots of stories to tell about the journey in all its amazingness. Talk about ***Entertainment!***. Then, I guess, the time for another Big Bang will come, when boredom sets in once again. But I digress.....

Let us not misunderstand each other here – social work is always good and useful. Those who ask for help should be able to receive it – not from a much higher being jumping them forward, but from a being that’s just a bit higher than they, who helps them help themselves; and who most certainly cannot pull them forward until they are ready. Hence the ***no interference*** rule holds good, as each asks for help.

### **(Below Balance) -**

The happy and stunning reality is that each time matter slides toward further chaos during an energetic transformation, this event causes an opposite and upward increase in spiritual order, or development, in a one-to-one relation. I have no proof whatever for this, other than believing in the essential balance of the universe. We all know that development can only take place by action and reaction - No pain, no gain (Was this Jane Fonda?). Most of us also recognize that we can only learn from personal experience; because our development cannot happen while watching TV or reading books, even when they show others learning from personal experience – well, maybe just a little bit. Thus, while it is my opinion that spiritual development takes place as inevitably as rainwater reaching the mighty ocean, almost all of it has to take place during incarnation.

Try as you might, you can only delay (or speed up) the growth and development of your own spirit being, but you cannot prevent its ultimate upward thrust to final union any more than the descent of matter to ultimate chaos can be prevented. It probably takes

about the same length of time, too. Is it not a Buddhist prayer that asks to be the last person into heaven? This might be arrogantly overdoing it; I do not think I need wait that long, as I know all the others are also, inevitably, moving upwards, and yes, it's going to take a while!. Well, maybe I will change my mind after a few more incarnations, I have free will, after all.

### Reincarnation is needed -

This means we **need** incarnation to be able to increase the size of our Spirit and scrape away our forgetfulness. As life in the Afterlife (Home!) cannot have any worthwhile challenges, we **need** to incarnate to develop in any meaningful way. And Earth, believe it or not, is one of the most sought-after locations for an incarnation, as life here has

enormous challenges and therefore can provide significant spiritual growth (We have “civil” wars here, among other things such as plagues of obesity and hunger at the same time. Go figure). They say that most of the other countless millions upon millions of other planetary systems with sentient life have their civilizations much better organized, and therefore less spiritually demanding than on Earth. Our complete memory wipe on each birth

allows us to get on with it, as an incarnation would be truly unbearable were we to **know** of home all the while. This comes later.

Spirit gains order by the increase in the disorder of matter. The material universe is finally discarded as a husk, having served its purpose. *Everything matters*, just like they always said “Not a sparrow shall fall ....” - which appears to be overdoing it, until we

know that not even a quantum particle shall disperse without useful growth in spirit. And if the energetic waves that form the matter are no longer energetic, are no longer vibrating, is the “matter” still there? Perhaps not – as usual, the design is perfect and nothing is wasted. Does it, um, matter? This kind of question, they tell us, is still being explored in the upper realms, with no clear answers as yet. Which we could not understand even if it were explained to us. Actually, that’s one of the things that impresses on me the truth of the psychic contacts with the afterlife, where they never say they know it all, and that the search goes on.

It is also my opinion that there can be no high-level interference - after the initial separation from the Big Bang, and totally unlike the rain returning to the ocean, the droplets of spirit cannot just jump home to reunion, or jump forward in their development. This is where the simile breaks down, as spirit is not like water.

### **Good & Bad -**

But anyone **can** voluntarily cause improvement in their own development; and, in my opinion, this is the only real difference between animals and humans: as a human, one can deliberately delay or improve one's development: delay it by being selfish or **bad**, improve it by being unselfish or **good** – helping others in need, while lower orders perforce follow more basic “instinctive” patterns. As the cloud of forgetfulness is slowly worn thinner through interaction with matter, so greater perception causes changes in outlook; grouping of spirit droplets happens where the whole is greater than the sum of its parts - yet none of the original experience and individuality is ever lost - *it simply becomes unimportant as growth continues*. Group souls, reincarnation, fairies, goblins, sprites, trolls, gnomes, dwarfs, water nymphs, sylphs (air spirits), salamanders (amphibian wonder workers) yes: all of them, in wonderfully complex and varied iterations.

In this awesome game there can never be a loss. As the fog slowly lifts, it can never return. Perception increased can never be diminished; spirit droplets once joined can never be undone. This is where I part company from the basic concepts of at least two major religions, Christianity - which has a one-shot eternal heaven-or-hell illogical nonsense, and Hindus who have bought the Brahmin story that you can reincarnate as a worm if you annoy a Brahmin or other suitable sin – *Pay us money to make your problem go away.*

Religion apart, all of our stories have happy endings. This might seem excessive to some of us, but when we take the larger view, this is not in doubt.

### **Death & Return -**

The pettiness of painful death hurts us in our ignorance; but only as humans - when we were lower, as plant and lower animal we did not fear it. They and ourselves certainly try to avoid it, though. Once we are beyond the human vibration (level), we will again be able to face such transitions and partings with an equanimity born of certain knowledge of the multi-dimensional aspect of our beings. It was Jaladin El Rumi, I think, who first stated that - *First we were mineral; then we became plant; then we became animal and at last human. And beyond human we shall be among the angels blessed and even beyond that. When were we ever less by dying?*. He also said that Sharia law prevented him from saying more – ~~now there's a surprise.~~

This is as far as my little human mind can understand; but even this pales before what really awaits us. Once beyond the human experience, these further layers of development are each as enormous as the stunning stages of mineral-plant-animal-human development in scope.

Various great teachers confirm this description, and even name the three highest levels (vibrational rates) mentioned above; Superhuman, Divine and Absolute. Each will no doubt have incarnation and reincarnation in some form. As for distinction between levels, let's look to the atom – electrons have particular orbits around their nucleus, and “move” from one to another instantaneously, *without passing through the space between*. I suspect similar action happens when spirit grouping has taken place, in the “move” from one dimension, level or vibrational rate to another – spirit simply “becomes” – when ready. No cheating allowed. And yes, recent physics is coming to grips with an impossibility – *an observed experiment behaves differently than one without a human observer*.

So the future is more fantastically tremendous than we can dream of, and thither are we all bound sooner or later. So take heart, nothing is ever wasted. ***We are immortal beings; surrounded by infinity; and we have eternity in which to explore it.***

That's what I think, anyway.

### **Epilogue -**

I live calmly in the reasonable expectation that all the above bears close resemblance to reality, and throughout my life I have experienced wonderful good fortune, and have no reason not to expect it to continue when I get Home!
